sharon.brooks@hemlow.com**Client:**

London Borough of Ealing

Description:

Working on behalf of Ealing Council, Hemlow were appointed as main and service contractor for this boiler replacement project.

The works consisted of the replacement of 4 x floor mounted boilers with 4 x high efficiency, compensating, frame mounted boilers, complete with header system, pipe work, valves, pumps and new low loss header into the existing compensated circuits. The existing flue was completely replaced with a new chimney stack liner and flue header system.

All works were undertaken during the Christmas holiday period.

The project had a very tight timescale and minimal leeway to source the full schedule of parts needed to undertake such a project but working in close partnership with the council consultants and utilising good negotiation skills, suitable plant and equipment was sourced, on time and in budget.

The works were successfully completed with no disruption to the operation of the school and the additional benefits of the new system increased the heating capacity of the old plant to provide additional expansion prospects of the school buildings.
