

# PRODUCT ECO-TESTING SCHEME (PETS)

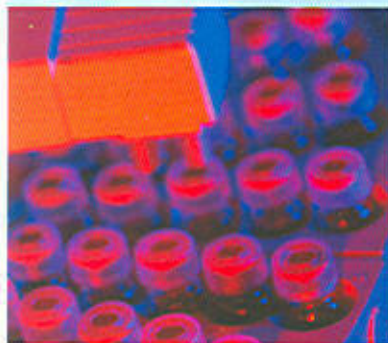

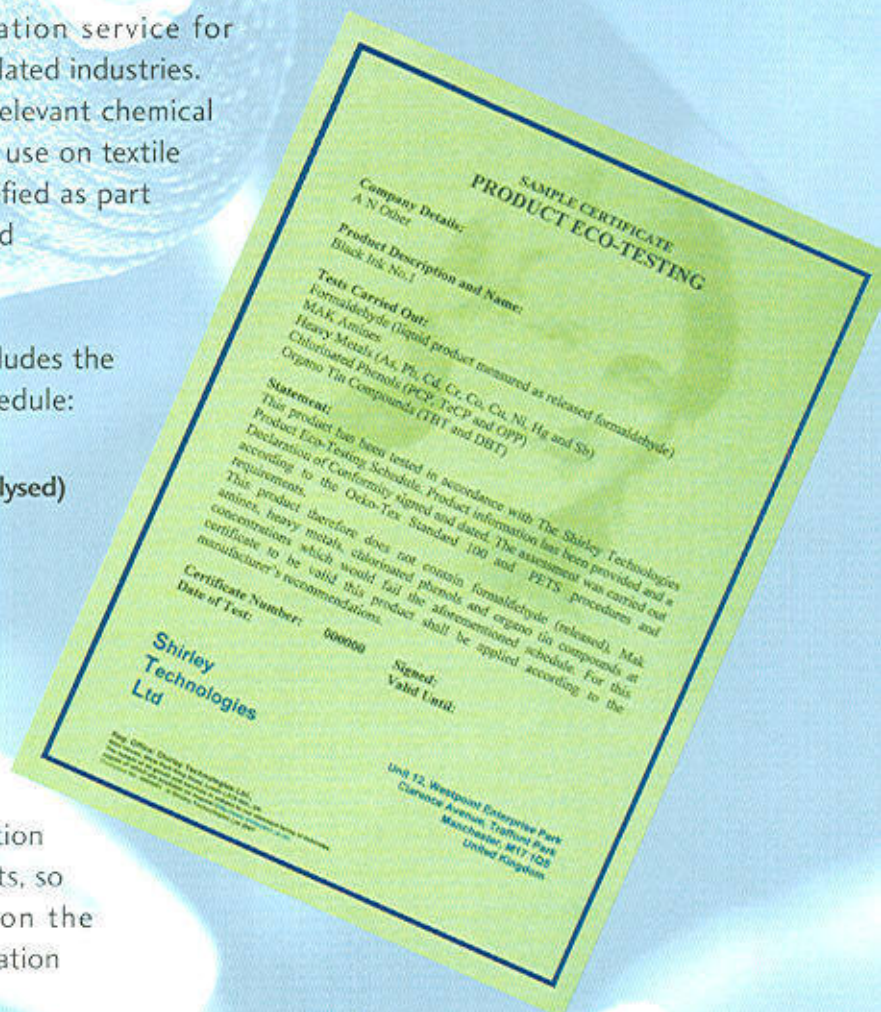

**Shirley Technologies Ltd**

**Shirley Technologies** offer a certification service for products that are used in the textile and related industries. The products are tested for a number of relevant chemical species to ensure that they are suitable for use on textile products, which are themselves to be certified as part of a wide range of human ecology related eco-labelling schemes.

The Product Eco-Testing (PET) Scheme includes the following tests/chemical species in its schedule:

- Formaldehyde (released or free and hydrolysed)
- Extractable heavy metals
- Chlorinated phenols
- MAK amines
- Allergenic disperse dyes
- Organo-tin compounds

As part of the scheme, a Declaration of Conformity must be signed and information provided such as Material Safety Data Sheets, so that a more informed decision can be made on the suitability and practicability of certification of the product.
