

# A personalised approach for selecting the breast enhancement implant that's right for you

## Planning for satisfaction with BioDynamic™

At Allergan we understand that every woman is an individual with her own physical differences and personal preferences. This is why we offer the widest range of breast implants available today and design them in many styles and shapes to help you achieve the look you want.

*Talking, listening and understanding are central to the BioDynamic™ system*

To help you discuss your wishes with your surgeon and to help them guide you through the process, Allergan has exclusive access to BioDynamic™, an interactive computer-based consultation program.\*

*Capturing your specific measurements*

BioDynamic™ has been designed to allow your surgeon to record all essential measurements which can be used to identify the implant choice which is right for the way you want to look.

*Selecting the right implant for you and generating an image of the potential results*

When the measurements are all recorded, BioDynamic™ not only guides you and your surgeon to the appropriate implant but it also creates a visualisation of the potential results taking into account both your needs and expectations.

A surgeon who uses the BioDynamic™ approach will select a specially designed external sizer which has been identified by the system according to your details and choices. When positioned over your current shape, the sizer helps demonstrate your potential look.

*A visual check using the external sizers helps you see how the results of your enhancement can appear*

For more information about the BioDynamic™ approach to breast enhancement, ask your surgeon and start planning ahead for the new you.

**Remember, the BioDynamic™ system is only available through selected clinics approved by Allergan.**
